In the article the author considers such important socio-economic problems of our time, as problems of the labour market, employment and unemployment in the youth sphere. At the present stage of market economy development, these problems are particularly acute. Statistics for the Russian Federation and KBR, as well as the data from recent sociological research in the republic affecting the subject are given. It is concluded that the lack of attention to the problems of young people casts doubt on plans of the country transformation and its welfare. The development of young person and creating conditions for its fulfillment should be government priority.

Keywords: *State, youth, authorities, public associations, employment, unemployment.*

The results of investigation of various features of the subjective perception of sources of danger by the population living in Volzhsky and Volgograd are represented. As a result of the public opinion poll a statistically significant difference in the perception of some hazards by the respondents of the two cities was revealed. In addition, in Volzhsky and Volgograd significant differences in the subjective perception of the hazards of men and women, as well as the respondents of different age groups were identified.

Keywords: *subjective perception of risk, population size of the city, sociological survey, underestimation of risk, respondent's gender, respondent's age.*
